**PLASCON WOODSEAL CLEAR POLYURETHANE VARNISH**

**(IN GLOSS & MATT)**

**PRODUCT DESCRIPTION AND USES**

Plascon Woodseal is a clear polyurethane-based lacquer which is excellent for coating of all types of interior timber, including wooden floors. The dry film provides a durable surface, which is highly resistant to wear as well as water, alcohol and usual household chemicals. Brings out the natural beauty of the timber.

**SURFACE PREPARATION**

The surface must be clean, dry and free from sanding dust, oil and grease.

*On untreated wood*

Mix approximately 9 volume parts of Woodseal with 1 volume part of Thinner and apply 1 coat. After 2-3 hours the coating may be sanded slightly using fine sand paper. After removing dust the surface is ready for the finishing coats. 3-4 full coats of Woodseal is recommended on new surfaces. Allow 16 hours between coats.

*On previously treated wood:*

Previously waxed (polished) floors are difficult to coat with lacquer, as even small residues of wax will adversely affect the drying and adhesion of the lacquer. Complete mechanical re-sanding is recommended in such cases. Removal of wax or polish may be done by repeated washing with White Spirit, but is not always satisfactory. Apply 1-2 coats of Woodseal.

Previously lacquered wood must be cleaned thoroughly and sanded with a fine sand paper to provide a suitable surface for the following coats of Woodseal. It is advisable to test the recoatability of the old lacquer by applying a coat of undiluted Woodseal on a small area to ensure that drying and adhesion are satisfactory. Apply 1-2 coats of Woodseal thinned to the required consistency.

**FINISH**

Available in full gloss and matt.

**APPLICATION**

By brush or spray gun
