PLASCON STONE FINISH

PRODUCT DESCRIPTION AND USES

Plascon Stone Finish is a Top quality Emulsion based on 100% acrylic. It offers a textured, highly decorative and protective finish. It can be used indoors and outdoors on various types of surfaces such as cement renderings, stone, pre-cast concrete, masonry work etc.

SALIENT FEATURES

Excellent Bonding;
High film build;
Good exterior durability.

SURFACE PREPARATION

Surfaces must be clean, dry and any loose powder should be removed.

STEEL—Sand blasting is recommended. Wire brushing may be used for small jobs where only mild corrosion is evident.

FIBRE GLASS — Abrading of surface is recommended.

PRIMING

Concrete & Fibre Glass— Use Plascon Acrylic Sealer Undercoat (White or Black or any coloured undercoat depending on the colour of archi-texture basecoat and colour of stones).

Galvanized Sheet, Steel – Use Plascon Zinc Chromate Free Red Oxide Primer, Plascon Zinc Phosphate Metal Primer or any coloured primer depending on the colour of the archi-texture basecoat and colour of stones.

FINISH

Heavy Textured Finish.

COLOURS AVAILABLE

White and selected shades

PLASCON STONE FINISH

APPLICATION METHODOLOGY

ARCHI TEXTURE BASE – Make a uniform application with a trowel to the required thickness i.e. 0.5 to 1mm. Apply a thin coat of water (by brush) on the wet base. Spray the marble stones on the wet base uniformly by hand or by gravity fed conventional spray gun and leave to dry for 3 hours.

STONE FINISH CLEAR – Apply two coats of the stone finish clear by brush. (Product can be diluted in the ratio of clear : water = 1:1.25 by volume)

THINNING AND MIXING
Clean water if required.

EQUIPMENT CLEANING
Clean the equipment immediately after use with water.

DRYING TIME
Surface dry within 3 hours; through dry after 24 hours.

COVERAGE

ARCHI TEXTURE BASE: 0.4-0.48Sqm/Kg.

MARBLE STONES: 0.12-0.2Sqm/Kg

STONE FINISH CLEAR: 8-10Sqm/Lt per coat.

NB. Handling loss of Marble Stones is 50-60%
